TITLE	New York State Hospital Manpower Survey, 1969.
INSTITUTION	new York State Health Dept., Albany.
SPONS AGENCY	Hospital Association of New York State, Albany.; New York State Health Planning Commission, Albany.
PUB DATE	Feb 70
NOTE	171p.
EDRS PRICE	MF-$0.65 HC-$6.58
DESCRIPTORS	Dental Hygienists; Dental Technicians; Health Occupations; *Hospital Personnel; Hospitals; Manpower Needs; Occupational Therapists; Physical Therapists; Social Workers; *State Surveys; Tables (Data)
IDENTIFIERS	*New York State

ABSTRACT

Data presented in this survey are in the form of tables and indicate the hospital manpower situation in New York State in May 1969. A total of 330,959 persons were employed, 65 0/0 in health professional and technical occupations. An additional 25,720 fulltime employees were needed. The categories showing the greatest percents of vacant budgeted positions were occupational therapists, physical therapists, licensed dental hygienists, and social workers. The only category showing no vacant budgeted positions was dental laboratory technicians. Data are shown by the total New York State and geographic areas within the state. These include New York City, New York State exclusive of New York City, and each county in the state. (MS)

FOREWORD

Provision of health services is the most rapidly growing industry in the United States. It now employs more than 3,500,000 people and is second only to agriculture and construction.

Health services depend on health manpower—and many areas of health manpower are in seriously short supply. Many of these shortage areas have already been identified, usually on a nationwide basis.

This survey was an effort by the State Health Department jointly with the New York State Hospital Association and the Health Planning Commission to assemble similar health manpower data for all areas of New York State and to present it in a format which affords maximum usability in each locality.

Hollis S. Ingraham, M.D.
Commissioner of Health

SUMMARY

The tables contained in this booklet show that, in hospitals in New York State in May, 1969, a total of 330,959 persons were employed on either a full-time or part-time basis. Of these, 213,504 (65%) were in health professional and technical occupations. An additional 25,720 full-time employees (budgeted and unbudgeted) were needed. Of these additional full-time persons needed, 20,406 (79%) were in health professional and technical occupations.

Among the health professional and technical occupations, the categories showing the greatest percents of total budgeted positions which were vacant were occupational therapists (29%), physical therapists (21%), licensed dental hygienists (17%), and social workers (16%). For each of the other health professional and technical categories, the percent of total budget positions which were vacant was less than 10%. The only category showing no vacant budgeted positions was dental laboratory technicians.

The data in this booklet are shown by the total New York State and geographic areas within New York State. These areas include New York City, New York State exclusive of New York City, and each county in the state.

INTRODUCTION

A survey of the health manpower resources in hospitals was conducted in 1966 by the Bureau of Health Manpower, Public Health Service, Department of Health, Education, and Welfare, and the American Hospital Association. The results of the study were reported in a pamphlet published by the American Hospital Association and contained information by states and groups of states only.

Similar information, broken down by counties in New York State, was found to be necessary and plans were initiated early in 1969 to collect and tabulate health manpower information in New York State on a county basis.

It was found that the survey of the American Hospital Association was to be repeated in March of 1969. This survey was conducted on a sample basis. The sample included 85 hospitals in New York State.

The New York State Health Department, the Hospital Association of New York State, and the New York State Health Planning Commission, therefore, jointly planned to collect similar information for all hospitals in the State, utilizing the information collected in the national survey and supplementing it with information from the remaining hospitals in the State.

In order that the national survey material could be collated with that collected for other hospitals in this study, the survey form used in the national study was adopted without change. Tabulation of the material follows a pattern similar to that of the national survey, but in much greater detail and by geographic areas within the State. This makes the material more useful for local purposes and indicates the needs of each area.

PROCEDURE

In April of 1969, survey materials, including questionnaires and occupation definition sheets (see appendix), were mailed to those institutions not included in the 1969 national sample survey referred to above but included on at least one of the following five rosters:

(1) The Master Facilities Index of the United States Department of Health, Education, and Welfare, July, 1967.

(2) The roster of those hospitals in New York State which have been issued valid operating certificates by the New York State Department of Health, February, 1969.

(3) The roster of the Hospital Association of New York State, April, 1969.

(4) The New York State section of the roster of the American Hospital Association, August, 1968.

(5) The roster of the New York State Department of Mental Hygiene, April, 1969.

In addition to the initial mailing, two follow-up mailings to non-reporting hospitals were conducted in May and June of 1969. After the mailings, further follow-ups were conducted by telephone. The returned questionnaires were validated by telephone whenever entries were missing or seemed questionable.

Data for those institutions which were not included in the national sample survey but which are included on at least one of the five rosters referred to above were combined with data from those 85 hospitals in New York State which were included in the national sample survey. Certain institutions were excluded from the survey prior to data processing because of determination that they were not hospitals or were found not to be in operation, and therefore, should not be included in the survey. Including those institutions in the national sample, a total of 512 hospitals were initially invited to participate in the New York State survey; a total of 478 hospitals were included in the survey; a total of 447 hospitals reported. The rate of response, including the returns from the national sample survey, was 94%. A description of the formulae used to compute the data for the tables in this booklet is contained in the appendix, along with copies of the questionnaire and instructions for completing the survey.

This booklet contains two basic types of tables--tables of staffing and current needs by occupational category and geographic area (see Tables I through IV), and summary tables showing needs in specific occupational categories in specific geographic areas (see Tables V through VIII).

The tables on present staffing and current needs by occupational category and county (see Table IV) include the actual data from questionnaires submitted by the reporting hospitals only. The three tables on staffing and current needs by occupational category for the total New York State, New York City, and New York State exclusive of New York City (see Tables I through III) include estimates (see appendix) of present staffing in non-reporting hospitals as well as present staffing data submitted by the reporting hospitals; estimates of current needs in non-reporting hospitals were not compiled.

The figures in the Tables I through IV represent individual persons whether employed full-time or part-time. A full-time employee was defined as one who works 35 or more hours per week (see Section B, column b of the questionnaire); a part-time employee was defined as one who works less than 35 hours per week (see Section B, column c of the questionnaire). The figures for budgeted and unbudgeted additional full-time personnel needed are derived from columns d and e of Section B of the questionnaire. The figures for beds in reporting hospitals are derived from the sum of Section A, items 3 and 4 (for Adult and Pediatric and New-born combined) of the questionnaire. The figures for beds in non-reporting hospitals were obtained from (1) the American Hospital Association roster of August, 1968, for non-reporting hospitals who are members of the American Hospital Association or (2) other sources for non-reporting hospitals who are not members of the American Hospital Association. It should be noted that, in Section B of the questionnaire, the hospitals were asked to report each individual employee in the occupational category in which he spends more than 50% of his working time, so that no employee should be reported in more than one occupational category.

The three summary tables (see Tables V through VII) showing, for reporting hospitals only, needs in specific occupational categories in the total New York State, New York City, and New York State exclusive of New York City separately give, for health professional and technical categories only (items 1.0 through 10.8 of Section B of the questionnaire), data for categories listed in order by rank according to percent of total budgeted positions which are vacant. The total budgeted positions are the sum of columns b, c, and d of Section B of the questionnaire. The budgeted positions filled are the sum of columns b and c of Section B of the questionnaire. The budgeted positions vacant are from column d of Section B of the questionnaire. The percent of budgeted positions which are vacant is the budgeted positions vacant expressed as a percent of the total budgeted positions. The additional unbudgeted positions needed are from column e of Section B of the questionnaire.

The summary table showing, for reporting hospitals only, needs in specific occupational categories by county (see Table VIII) contains data similar to those in Tables V through VII for the five health professional and technical categories reporting the highest percents of budgeted positions vacant for each county. Whenever, in a given county, the number of total budgeted positions for a given category is less than ten, data for that category are excluded from the table. For example, if a county had reported nine total budgeted positions for dental assistants, data for dental assistants would be excluded from the table even if all nine budgeted positions were reported as vacant. Whenever the percent of budgeted positions which are vacant is less than one-half of one percent, it appears as "0" on the table.

FOOTNOTES

[1] Includes estimates for non-reporting hospitals (see Appendix).

[2] Only categories with ten or more total budgeted positions are listed; therefore, for some counties, fewer than five categories will be listed.

ACKNOWLEDGMENTS

Acknowledgments cannot be given to all of those in the New York State Department of Health, The Hospital Association of New York State, and the New York State Health Planning Commission who advised or assisted in the conduct of the study or preparation of the report, nor can adequate thanks be given to those members of the staffs of the hospitals who completed the questionnaires and answered innumerable follow-up questions.

However, those who were principally responsible for this survey and report are:

- Franklyn B. Amos, M.D.
  Assistant Commissioner for Health Manpower
  New York State Department of Health

- E. Bradley Boyle
  Director of Public Relations and Publications
  Office of Public Health Education
  New York State Department of Health

- George McVey
  Associate Biostatistician
  Office of Biostatistics
  New York State Department of Health
  Survey Director

- Charles M. Royle
  Executive Vice President
  Hospital Association of New York State

- V. Earle Nicklas
  Director
  Management Research
  Hospital Educational and Research Fund, Inc.

- Jane Schweers
  Administrative Assistant
  Hospital Educational and Research Fund, Inc.

- Edward H. Van Ness
  Executive Director
  New York State Health Planning Commission

- Raymond Wickham
  Former Deputy Executive Director
  New York State Health Planning Commission

- Paul F. Robinson
  Associate Executive Director
  New York State Health Planning Commission

Additional acknowledgments are made to:

- David B. Hoover
  Chief, Manpower Resources Branch
  Division of Allied Health Manpower
  Department of Health, Education, and Welfare
  National Institutes of Health

for his assistance in planning the New York State survey,

- Garrie J. Losee
  Project Director
  Hospital Manpower Survey
  Bureau of Health Professions Education and Manpower Training
  Department of Health, Education, and Welfare
  National Institutes of Health

for his assistance in planning the New York State survey and for providing data from the national Hospital Manpower Survey to supplement those collected by the New York State survey, and

- Jon D. Miller
  Director, Division of Research
  American Hospital Association

for his assistance in providing data from the national survey to supplement those collected by the New York State survey.

APPENDIX

I. Instructions for Completing the New York State Hospital Manpower Survey Questionnaire Form

A total of 512 institutions had questionnaires sent to them. Of these, 427 received the New York State Hospital survey questionnaire (see Appendix item III) from the Hospital Association of New York State. The remaining 85 institutions, which were included in the 1969 national sample survey, received a national sample survey questionnaire form from the United States Public Health Service which was identical with the New York State questionnaire, except that it asked for data as of March 28, 1969, rather than May 2, 1969. The same set of occupation definitions (see Appendix item IV) was mailed to all 512 institutions. The institutions receiving the New York State questionnaire were requested to send returns to the Hospital Association of New York State. Those institutions receiving the national sample survey questionnaire forms were requested to send returns to the United States Public Health Service.

The questionnaire is divided into four sections as follows:

Section A - Beds and Utilization
Section B - Personnel by Occupational Category
Section C - Health Occupation Training Programs
Section D - Information including name and title of the person completing the form, date of completion, and telephone number at which the person completing the form could be reached.

A. In Section A, for Adult and Pediatric and Newborn facilities separately, the following information was requested:

1. The number of inpatient days of service during the calendar year 1968.

2. The total inpatient days of service for April, 1969 (New York State questionnaire) or for March, 1969 (United States Public Health Service questionnaire).

3. The number of beds set up and staffed for inpatients on May 2, 1969 (New York State questionnaire) or on March 28, 1969 (United States Public Health Service questionnaire).

4. The number of beds set up but not staffed on May 2, 1969 (New York State questionnaire) or on March 28, 1969 (United States Public Health Service questionnaire).

5. The number of beds which the institution plans to have by the end of March, 1970.

The above information was requested for all units and component institutions of the hospital, except for components or units with separate discharge procedures, which were to be considered as separate facilities. If the person completing the form was in doubt about any unit, he was requested to include the unit and explain in the "Comments" section on page 4 of the questionnaire.

B. In Section B, the following information regarding each occupational category on the questionnaire (see Appendix item III) as described in the set of occupation definitions (see Appendix item IV) was requested:

1. Full-time (35 or more hours per week) employees on the payroll.

2. Part-time (less than 35 hours per week) employees on the payroll.

3. Additional full-time personnel needed to provide optimum care for the present patient load - budgeted vacant positions and positions not in the budget separately.

4. Estimates of personnel in addition to those covered by items 1 through 3 above who will be needed by the end of March, 1970 for staffing more beds and/or new services (for capitalized subgroupings of occupational categories only, except for "OTHER HOSPITAL PERSONNEL"; see questionnaire in Appendix item III). This information was asked only for hospitals planning to add more beds by the end of March, 1970 or planning to add new services by the end of March, 1970.

Section B was to include only regularly employed persons on the payroll according to the occupations as described on the occupation definition sheet. Any person performing duties in more than one occupational category was to be reported in the category in which he spends most of his time. For "zero" entries in Section B, a dash (-) was to be entered in the appropriate space.

The following groups of persons were to be included: teaching staff. research workers, staff of outpatient facilities and extended care units, temporarily absent employees, trainees (if on the payroll), and members of religious orders (both paid and unpaid).

The following groups of persons were to be excluded: courtesy or attending staff. persons providing services on a fee-for-service or contract basis or working "on call" to relieve temporarily absent employees, private duty nurses, and volunteer workers.

C. In Section C, hospitals were asked whether they had conducted any formal health occupation training programs (for other than physicians and dentists) during the past 12 months. If not, they were asked to skip to Section D, leaving the remainder of Section C blank. Otherwise, for each occupation for which a formal program was conducted (see questionnaire in Appendix item III), the following information was requested:

1. Length of training in months.

2. Number of persons completing training in the calendar year 1968.

3. Total enrollment in the program on May 2, 1969 (New York State questionnaire) or on March 28, 1969 (United States Public Health Service questionnaire), including separate figures for employees on the payroll and others attending.

4. An indication whether the course was college affiliated.

In addition to the ten occupations listed for which the existence of programs was specifically asked, space was provided on the questionnaire under "Other formal programs (Specify)" for a maximum of three other occupations for which courses may have been conducted (see questionnaire in Appendix item III).

The courses indicated on the questionnaire were to include only formal health occupation training programs. They were to exclude education activities, orientation programs, informal on-the-job training, training activities for other than health occupations, and programs of colleges and universities conducted wholly or partly in the hospital but for which the hospital does not control admissions. Figures for employees on the payroll who were enrolled in courses on May 2, 1969 (or March 28, 1969, for the United States Public Health Service questionnaire) should have included trainees indicated in Section B, item 10.8 of the questionnaire, as these are students or trainees paid directly by the hospital. Figures for those not on the payroll of the hospital who were enrolled in a training program as of May 2, 1969 (or March 28, 1969, for the United States Public Health Service questionnaire) should have included only those not paid directly by the hospital, although they may receive stipends from sources such as the federal government.

II. Tables

The tables in this booklet are, basically, of two types. The first type shows present staffing and additional staffing needs by occupational category and geographic area (see Tables I through IV). The second type summarizes needs by occupational category and geographic area, pinpointing the areas of greatest need (see Tables V through VIII).

The county tables showing present staffing and additional full-time needs (Table IV) include only data actually submitted by reporting hospitals. The tables for New York State, New York City, and New York State exclusive of New York City (Tables I through III) include estimates for present staffing in non-reporting hospitals, but show additional full-time needs only for reporting hospitals. Entries in Tables I through IV for full-time present staff are from information from column b of Section B of the questionnaire. Entries for part-time present staff are from column c of Section B of the questionnaire. The total present staff column entries are the sum of the full-time and part-time entries. The entries for additional full-time positions needed (budgeted) are from column d of Section B of the questionnaire. Entries for additional full-time unbudgeted positions needed are from column e of Section B of the questionnaire. The entries for total additional full-time positions needed are the sum of the budgeted and unbudgeted figures. Figures for beds in Tables I through IV are all staffed and unstaffed Adult and Pediatric and Newborn beds (see Section A of the questionnaire).

The figures for present staff in Tables I through III include estimates for non-reporting hospitals. For example, in New York City, 312 occupational therapists (either full-time or part-time) were reported. However, Table II shows 327 occupational therapists (either full-time or part-time) for both reporting and non-reporting hospitals; therefore, it is estimated that there were 15 occupational therapists in non-reporting hospitals in New York City.

The procedure used to obtain the total figures for present staff in reporting and non-reporting hospitals in Tables I through III is as follows:

(1) Hospitals were divided into nine separate groups or strata as follows:

  (a) Less than 50 staffed Adult and Pediatric and Newborn beds; median length of stay of patient less than 30 days.

  (b) 50 - 99 staffed Adult and Pediatric and Newborn beds; median length of stay of patient less than 30 days.

  (c) 100 - 199 staffed Adult and Pediatric and Newborn beds; median length of stay of patient less than 30 days.

  (d) 200 - 499 staffed Adult and Pediatric and Newborn beds; median length of stay of patient less than 30 days.

  (e) 500 or more staffed Adult and Pediatric and Newborn beds; median length of stay of patient less than 30 days.

  (f) Less than 100 staffed Adult and Pediatric and Newborn beds;

median length of stay of patient 30 days or more.

(g) 100 - 499 staffed Adult and Pediatric and Newborn beds; median length of stay of patient 30 days or more.

(h) 500 or more staffed Adult and Pediatric and Newborn beds; median length of stay of patient 30 days or more; psychiatric.

(i) 500 or more staffed Adult and Pediatric and Newborn beds; median length of stay of patient 30 days or more; non-psychiatric.

(2) For each full-time and part-time entry for each individual occupational category, the entries for each of the individual reporting hospitals in each of the above strata were summed.

(3) For each stratum for each occupational category, the figures for all reporting hospitals was multiplied by the ratio of the total number of surveyed hospitals in that stratum to the number of reporting hospitals in that stratum, producing an estimate for each occupational category in each stratum. For each occupational category, the estimates as obtained above for each of the nine strata were summed, producing the full-time and part-time present staffing figures in Tables I through III.

The above estimation procedure may be illustrated by a hypothetical example. Suppose that the following data are given (strata are identified by letters as in (1) above):

Stratum	(1) Number of Hospitals in New York City	(2) Number of Reporting Hospitals in New York City	(3) Number of Full-Time Occupational Therapists in Reporting Hospitals in New York City
(a)	17	14	28
(b)	20	16	16
(c)	15	10	12
(d)	23	23	6
(e)	10	9	18
(f)	30	23	23
(g)	24	24	17
(h)	12	10	5
(i)	15	14	28

From the above table, the estimated number of full-time occupational therapists in hospitals in New York City is (17/14) x 28 + (20/16) x 16 + (15/10) x 12 + (23/23) x 6 + (10/9) x 18 + (30/23) x 23 + (24/24) x 17 + (12/10) x 5 + (15/14) x 28 = 181. This figure was obtained by computing, for each stratum, the ratio of the figure in column (1) to that in column (2) and multiplying that ratio by the figure in column (3), and summing over all strata.

Tables V, VI and VII show needs by specific occupational category (health professional and technical occupation only) in New York State, New York City, and New York State exclusive of New York City, respectively. The percent of total budgeted positions are the sum of columns b, c and d from Section B of the questionnaire. The budgeted questions filled are the sum of columns b and c. The budgeted positions vacant are from column d. The percent of budgeted positions which are vacant is the column d entry expressed as a percent of the sum of the entries in columns b, c and d. The additional unbudgeted positions needed are from column e. Data in Tables V, VI and VII are from reporting hospitals only.

Table VIII shows, for each county in the state, data similar to those in Tables V, VI and VII, for the five health professional and technical occupation categories reporting the greatest needs in the county, using the percent of budgeted positions which are vacant as an index of need. No county table includes data for any categories for which less than ten total budgeted positions are reported. Therefore, for some counties, less than five categories are listed. Data for all health professional and technical categories combined are included for each county. Data in Table VIII are from reporting hospitals only. Whenever the percent of budgeted positions which are vacant is less than one-half of one percent, it appears as "0" on the table.

NEW YORK STATE
HOSPITAL MANPOWER SURVEY

Dear Administrator:

A current assessment of hospital manpower resources and needs in New York State is essential. The information obtained will be useful to planning organizations, governmental agencies, educational institutions, hospital associations, and to hospitals themselves.

The American Hospital Association and the U.S. Public Health Service are currently conducting, on a sample basis, a survey of hospital manpower, which will provide up-to-date information to compare with the last national survey, which was completed in 1966. The 1969 national sample includes 85 hospitals from New York State.

To maximize coordination and efficiency, the Hospital Association of New York State, the New York State Department of Health, and the New York State Health Planning Commission have agreed to conduct this survey statewide. The information that we now seek from all other hospitals in the State is essentially the same as is being obtained from those in the sample.

Your attention to this request, and return of the white survey form after it has been completed (the blue copy is for your files) in the return envelope, will be appreciated.

Franklyn B. Amos

New York State

Section A - BEDS AND UTILIZATION

Include data for your entire hospital and all parts, units, component institutions, etc. However, do not include any component or unit which has its own separate discharge procedures. The latter are to be considered separate facilities. If you are in doubt about any unit, please include the unit and explain in the "Comments" section on page 4.

	Adult and pediatric	Newborn
1. What was the number of inpatient days of service during calendar year 1968?		
2. What was the total inpatient days of service for the 30 days of April 1969?		
3. How many beds were set up and staffed for inpatients on May 2, 1969?		
4. How many beds were set up but not staffed on May 2, 1969?		
5. How many beds do you plan to have by the end of March 1970?		

INSTRUCTIONS FOR COMPLETING SECTION B

1. Enter the number of ***regularly employed persons on the payroll*** by appropriate occupation.
2. Report persons functioning in ***more than one occupational category only once***, according to the occupation he devotes most of his time.
3. See attachment for occupational definitions.
4. ***Mark a dash (-)*** if there are no employees in any of the specific occupational categories.
5. a. ***Personnel to include***
   - Teaching staff
   - Research workers
   - Staff of outpatient facilities
   - Staff of extended care units
   - Temporarily absent employees
   - Trainees (If on the payroll)
   - Members of religious orders, whether paid or unpaid

   b. ***Personnel to exclude***
   - Courtesy or attending staff
   - Persons providing services on fee-for-service or contract basis
   - Persons who work "on call" to relieve temporarily absent employees
   - Private duty nurses
   - Volunteer workers
6. ***Column (f)***--If the hospital bed capacity will be increased during the next 12 months, estimate the personnel requirements in excess of those already reported in the preceding columns. (b-e) Also include in your estimate additional personnel required for new services to be established.

SECTION B. PERSONNEL BY OCCUPATIONAL CATEGORY

Occupational category (a)	Number of Employees on payroll as of May 2, 1969		Additional full-time personnel needed to provide optimum care for present patient load		*Anticipated additional personnel needed by the end of March 1970 for staffing more beds and/or new services* (f)
	Full time (35 hrs or more per week) (b)	Part time (Less than 35 hrs per week) (c)	Budgeted vacant positions (d)	Positions not in budget (e)	
PHYSICIANS					—

OTHER HOSPITAL PERSONNEL					XXXX
11.0 Food service					
11.1 Laundry					
11.2 Housekeeping					
11.3 Maintenance					
11.4 Business management					
11.5 Clerical, secretarial and related services					
11.6 All other hospital personnel					
TOTAL HOSPITAL PERSONNEL					XXXX

INSTRUCTIONS FOR COMPLETING SECTION C

1. Report information on the formal health occupation training programs. ***Do not include education activities***, orientation programs, informal on-the-job training, and training activities for other than health occupations. Exclude programs of colleges and universities conducted all or in part in your hospital but for which your hospital does not control admission (e.g., clinical components of courses).
2. ***Employees reported in 10.8 of Section B*** (trainees) should also be listed in column d. These are persons paid directly by the hospital who are in student or trainee status.
3. ***Others reported in column (e)*** are not paid directly by the hospital. They may, however, receive a stipend from such sources as the federal government.

SECTION C - HEALTH OCCUPATION TRAINING PROGRAMS

Has your hospital conducted any formal health occupation training programs (for other than physicians and dentists) in the past 12 months?

☐ Yes ☐ No (Skip to Section D)

In the last 12 months were formal training programs conducted for any of the following occupations (a)	No	Yes	Length of training (months) (b)	Number of persons who completed training in calendar 1968 (c)	Enrollment on May 2, 1969		College affiliation	
					Employees (on payroll) (d)	Other number (not on payroll) (e)	Yes (f)	No (g)
1. Certified lab. assistant	☐	☐ →						
2. Cytotechnology	☐	☐ →						
3. Dietetic internship	☐	☐ →						
4. Medical technology	☐	☐ →						
5. Nursing aide or attendant	☐	☐ →						
6. Practical nursing	☐	☐ →						
7. Registered nursing	☐	☐ →						
8. Surgical technician	☐	☐ →						
9. Ward clerk	☐	☐ →						
10. X-ray technology	☐	☐ →						
11. Other formal programs (Specify):	☐	☐ ↘	▨	▨	▨	▨	▨	▨

SECTION D

Name of person completing this form	Date
Title	Telephone number Area code Number

Return the completed questionnaire in the postage-paid envelope provided to: Hospital Association of New York State, 111 Washington Avenue, Albany, New York 12210.

Comments

IV. Occupation Definitions

The following set of occupation definitions was used to complete Section B of the survey questionnaire:

PHYSICIANS
